<b>Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:</b>	<b>Prerequisites for enrolling in the course or for performing study obligations:</b>

<b>Vsebina (kratek pregled učnega načrta):</b>  Študent se seznaní s strokovnim področjem fizikalne in rehabilitacijske medicine, spozna pravila transdisciplinarnega timskega dela v rehabilitaciji in podrobnejše vloge posameznih strokovnjakov.  Spozna pojme okvara, prizadetost in oviranost ter rehabilitacijske postopke za zmanjševanje posledic bolezni in poškodb na različnih področjih – medicinska, profesionalna, edukacijska, socialna rehabilitacija. S področja fizikalne medicine so predstavljene metode fizikalne terapije: kinezioterapija, elektroterapija, magnetoterapija, termoterapija, hidroterapija, sonoterapija, fototerapija in mehanoterapija. Dobi osnovne informacije iz področja balneologije in	<b>Content (syllabus outline):</b>  The student get acquainted with the professional aspect of physical and rehabilitation medicine, learns the rules of trasndisciplinary team work in rehabilitation and learns in details the role of individual experts. The students get acquainted with the terms impairment, disability and handicap as well rehabilitation procedures for decreasing the consequences of diseases and injuries in different settings – medical, professional, educational, social rehabilitation. The following physical therapy methods are presented in the field of physical medicine: kinesiotherapy, electrotherapy, magneto therapy, thermotherapy, hydrotherapy, sonotherapy, phototherapy and mechanotherapy. The student receives the basic

klimatologije – izkoriščanje klimatskih pogojev v terapevtske namene.

Na področju rehabilitacije so predstavljeni programi za obravnavo bolnikov z najpogostejšimi zdravstvenimi problemi. V okviru gerontološke rehabilitacije se študenti seznanijo s posebnostmi fizikalne medicine in rehabilitacije pri starostnikih. Predstavljeni so tehnični pripomočki za izboljšanje zmožnosti gibanja in opravljanja dnevnih aktivnosti.

Področje fiziatrije zajema konzervativno ortopedijo – diagnostiko in terapijo obolenja gibalnega sistema. Predstavljena je fiziatrična propedevтика in natančnejše usmerjeni klinični testi, ki so osnova za pravilno dignostično opredelitev in napotovanje na dodatne preiskave. Študenti spoznajo pomen UZ in EMG diagnostike. Seznanijo se s principom strokovnega, z dokazi podprtrega in racionalnega predpisa metod fizikalne terapije.

Podana je tudi organizacijska shema rehabilitacije na vseh treh strokovnih nivojih – primarni (zdravstveni domovi, zasebni fizioterapevti), sekundarni (bolnišnice, zdravilišča) in terciarni (Univerzitetni rehabilitacijski institut Republike Slovenije – Soča).

information from balneology and climatology – employing climate conditions for therapeutic purposes.

In the field of rehabilitation, programs are presented for treating patients with the most common health problems. In gerontological rehabilitation the students get acquainted with the special characteristics of physical and rehabilitation medicine in elderly people. They learn about technical accessories for improving the ability to move and perform everyday activities.

The field of physiatrics includes conservative orthopedics – diagnosis and therapy of affected movement system. The students learn about physiatric propedeutics and specific targeted clinical tests, which serve as the basis for correct diagnostic orientation and referral for additional tests. The students learn the importance of US and EMG diagnostics. They get acquainted with the principle of professional, evidence-based and rational choice of physical therapy.

The students learn about the organizational framework of rehabilitation at all three professional levels - primary (public health care institutes, private physiotherapists), secondary (hospitals, thermal centers), and tertiary (University Rehabilitation Institute of the Republic of Slovenia – Soča)

### Cilji in kompetence:

Prikazati študentu osnovne informacije stroke Medicinka rehabilitacija kot neposredni del timskega zdravljenja. Informirati ga o metodah fizikalne terapije kot terapevtski program za posamezne bolezni in poškodbe. Seznaniti o možnostih specialista fizikalne medicine na primarni, sekundarni in terciarni ravni.

Osnovno informacijo o diagnostiki v fizikalni medicini (EMG, UZ).

### Objectives and competences:

Presentation of the basic professional information about the Medical rehabilitation as a direct part of integrated healing. Aim of the course is to inform the student about the methods of physical therapy, therapeutic program for certain diseases and injuries.

Moreover, possibilities of physical medicine on the primary, secondary and tertiary level will be presented as well as basic information of diagnostics in physical medicine (Ultrasound, thermovision, EM)

--	--

#### Predvideni študijski rezultati:

Znanje in razumevanje:

Poznavanje strokovnega področja rehabilitacije.

Praktično znanje fiziatričnega kliničnega pregleda in poznavanje najpogostejših patoloških stanj, ki potrebujejo rehabilitacijsko obravnavo.

Prenesljive ključne spretnosti in drugi atributi:

Spretnost v prepoznavanju poglavitnih funkcionalnih motenj, ki jih rehabilitacija lahko izboljša. Razumevanje poteka in vloge rehabilitacije v vrniti bolnika/poškodovanca v normalno življenje. Poznavanje vloge posameznega člena rehabilitacijskega tima in tako ustrezno usmerjanje obravnave bolnika na primarnem nivoju. Poznavanje tehničnih možnosti za nadomeščanje prizadetih funkcij.

#### Intended learning outcomes:

Knowledge and Understanding of rehabilitation. Practical knowledge on physiatric clinical examination and most often pathologic conditions in need of rehabilitation treatment.

Transferable/Key Skills and other attributes:

Recognition of main functional disorders, which could be improved by rehabilitation.

Understanding of the course and role of the rehabilitation in patient's returning into normal life.

Recognition of the role of each member of the team in patient treatment on primary level.

Knowledge about technical possibilities of replacement of affected functions.

#### Metode poučevanja in učenja:

Predavanja, vaje, video prezentacija, klinične demonstracije.

#### Learning and teaching methods:

Lectures, exercises, video presentations, clinical demonstrations

Načini ocenjevanja:	Delež (v %) / Share (in %)	Assessment methods:
<p>Način (pisni izpit, ustno izpraševanje, naloge, projekt)</p> <p>Seminarsko delo</p> <p>Pisni izpit</p> <p>ŠTUDIJSKE OBVEZNOSTI ŠTUDENTOV: Vsaj 50 % prisotnost na predavanjih, aktivna priprava in predstavitev seminarskega dela, aktivno sodelovanje na vajah, vsaj 80 % prisotnost na vajah in seminarjih.</p> <p>POGOJI ZA PRISTOP K POSAMEZNEMU PREVERJANJU ZNANJA: Opravljeni študijske obveznosti in opravljen seminar.</p>	100	<p>Type (examination, oral, coursework, project):</p> <p>Seminar Written exam</p> <p>ACADEMIC OBLIGATIONS OF STUDENTS: At least 50% attendance at lectures, active preparation and presentation of a coursework assignment, active cooperation in practice, at least 80% attendance at practice and coursework.</p> <p>REQUIREMENTS FOR ACCESS TO INDIVIDUAL KNOWLEDGE CHECKING Completed academic obligations.</p>
