### **Cilji in kompetence:**

Študent razširjeno in poglobljeno proučuje izbrane teme iz celotnega obsega vsebin izbranega predmeta, na osnovi svojega že pridobljenega znanja.  
Cilj je priprava študenta na samostojno obravnavo in predstavitev posameznih tem na osnovi tekočih doganjaj v klinični praksi.

### **Objectives and competences:**

The student studies in detail chosen specific topics concerning clinical anatomy, based on his already achieved knowledge in anatomy.  
The aim is to prepare a student for individual treatment and presentation of certain topics on the basis of current events in clinical practice.

### **Predvideni študijski rezultati:**

Znanje in razumevanje:  
Študent utrjuje in poglablja znanja in veščine, potrebne za samostojno delo in razčlenjevanje posameznih problemov na osnovi podatkov, dobljenih iz sodobne strokovne literature. Hkrati s tem utrjuje in poglablja znanja in veščine, potrebne za samostojno iskanje sodobnih virov podatkov iz izbranega področja, njihovo analizo in predstavitev.

Prenesljive/ključne spremnosti in drugi atributi:

Prepoznavanje manj ali več pogostih anatomskeh variacij in ugotavljanje pomembnosti le-teh za klinično prakso, sposobnost za diferencialno diagnostiko določenih patoloških doganjaj na osnovi že obstoječega znanja.

### **Intended learning outcomes:**

Knowledge and Understanding:  
The student improves his knowledge and skills that are necessary for individual work and for analysis of certain problems based on data from the contemporary medical literature. The student also improves the knowledge and skills for individual searching for sources of data from the elected area, their analysis and presentation.

Transferable/Key Skills and other attributes:

The recognition of more or less frequent anatomical variations and recognition of their significance for clinical practice, the ability of differential diagnostics of certain pathological processes on the basis of already obtained knowledge.
