Vaje / Tutorial: slovenščina/slovene

Pogoji za vključitev v delo oz. za opravljanje študijskih  
obveznosti:

Prerequisites:

**Vsebina:**

Pri predmetu se bo študent seznanil z anatomsko delitvijo ustne votline, na mehka tkiva, zobe in kosti ter njihovo vlogo pri govoru, žvečenju, prebavi in zaužitju hrane ter fiziognomiji obraza.

Spozna zobno nomenklaturo (poimenovanje zob) in označuje določene zobne površine. Anatomija zob in histologija zognega organa predstavlja glavni teoretični in praktični del predmeta.

Študent se bo seznanil z morfologijo zob in zbnih lokov mlečne in stalne dentitije, prav tako bo seznanjen z morfološkimi značilnostmi zgornjih in spodnjih sekalcev, podočnikov, ličnikov in kočnikov; orientacijske površine in linije v ustni votlini in obrazu ter odnos med zobi pri fiziološkem stiku (okluzija, artikulacija).

**Content (Syllabus outline):**

During class, the student will become familiar with the anatomical division of the oral cavity into soft tissues, teeth and bones, and their role in phonation, mastication, digestion and food ingestion, and facial physiognomy.

It will be introduced with dental nomenclature and marking certain tooth surfaces. Teeth anatomy and dental tissue histology make up the theoretical and practical part of the lesson.

It will become familiar with morphology of teeth and dental arches of deciduous and permanent dentition, will adopt morphological characteristics of upper and lower incisors, canines, premolars and molars; Orientation surfaces and curves in the oral cavity and face, and the relationship between teeth in physiological contact (occlusion, articulation).

2. Fehrenbach MJ, Popowics T. Illustrated Dental Embryology, Histology, and Anatomy. 4<sup>th</sup> edition. Elsevier Saunders 2015
3. Berkowitz B.K.B., Holland G.R. Moxham BJ. Oral anatomy histology & embriology. Fifth edition. Elsevier 2018

**Cilji in kompetence:**

Predmet združuje in proučuje anatomske in morfološke podrobnosti vseh zob prve in druge denticije (mlečne in stalne denticije) ter njihove medsebojne odnose in odnose med vsemi anatomskimi strukturami ustne votline ali orofacialnega sistema. Razen morfoloških podrobnosti vključuje tudi fiziološko vlogo zoba, čeljusti in ustne votline kot začetnega dela prebavnega sistema.

**Objectives and competences:**

The course associates and studies anatomical and morphological details of the teeth in first and second dentition, and their mutual relations and relations of all anatomical structures of the oral cavity, or the oro-facial system. In addition to morphological detail, it includes physiological role of teeth, jaws and mouth as the initial part of the digestive system.

**Predvideni študijski rezultati:****Intended learning outcomes:****Znanje in razumevanje:**

Opisati morfološke značilnosti vseh stalnih zob  
 Razlikovati mlečne zobe od stalnih zob  
 Oblikovati grizne površine vseh stranskih zob  
 Oblikovati labialne površine sekalcev  
 Določiti funkcijo stomatognatskega sistema  
 Opisati anatomsko-morfološke značilnosti zob in čeljusti  
 Pojasniti fiziološko funkcijo ustne votline  
 Primerjati orientacijske ravnine (transverzalno, sagitalno in vertikalno)  
 Opisati anatomske značilnosti nekaterih delov zuba (krona, vrat, endodontski prostor in korenina)  
 Opisati in primerjati skupne značilnosti zuba v čeljusti  
 Primerjati in razlikovati nomenklaturo in sisteme označevanja zuba v čeljusti in ustni votlini  
 Registrirati ugotovitve  
 Razlikovati med topografskimi in anatomske značilnostmi zuba  
 Opisati in analizirati anomalije zuba  
 Opisati strukturo zobnega tkiva  
 Opisati temelje okluzije in artikulacije  
 Opisati fizikalne lastnosti in kemično strukturo sklenine

Znanja in spretnosti so podrobneje opisane v Katalogu znanj in spretnosti.

**Knowledge and understanding:**

Describe the morphological characteristics of permanent teeth  
 Distinguish between deciduous and the permanent teeth  
 Make the occlusal surfaces of posterior teeth  
 Make the labial surfaces of incisors  
 Define the function of the stomatognathic system  
 Describe the anatomical-morphological characteristics of teeth and jaws  
 Describe physiological function of the oral cavity  
 Compare transversal, sagittal and vertical planes  
 Describe the anatomical features of some parts of the tooth (crown, neck, root canal space and root)  
 Describe and compare common characteristics of teeth in jaws  
 Compare and distinguish between the nomenclature and systems of marking teeth in the jaw and oral cavity  
 Make registration of findings  
 Distinguish between topographic and anatomical properties of the teeth  
 Describe and analyze the tooth anomalies  
 Describe structure of dental tissues  
 Describe the types of occlusion and occlusal position  
 Describe the physical properties and chemical structure of enamel.  
 Knowledge and skills are described in more detail in the Catalogue of Knowledge and Skills.
