<b>Vsebina:</b>  Rast in razvoj kraniofacialnega sistema in zobovja. Metode spremljanja rasti in razvoja. Ključi okluzije. Odtiskovanje, odlitki in izdelava študijskega modela. Oblikovanje in laboratorijska izdelava retencijskih zapon, labialnega loka in peres. Oblikovanje in namestitev vijakov. Polimerizacijske tehnike izdelave snemnih ortodontskih aparatov. Biostar tehnika. Varjenje in spajkanje. Izdelava snemnih plošč. Izdelava funkcionalnih aparatov. Konstrukcija interceptivnih aparatov. Konstrukcija nesnemnih aparatov. Poliranje snemnih ortodontskih aparatov. Okluzija in artikulator. Filozofija in nevrofiziologija konstrukcijskega griza.	<b>Content (Syllabus outline):</b>  Growth and development of craniofacial complex and dentition. Methods of monitoring the growth and development. Keys of occlusion. Taking impressions, casting and forming plaster models. Design and laboratory manufacture of retention clasps, labial bow and springs. Design and incorporation of screws. Polymerization techniques in manufacture of removable orthodontic appliances. Biostar technique. Spot welding and soldering. Construction of base plate. Construction of functional appliances. Construction of interceptive appliances. Construction of fixed appliances. Polishing mobile orthodontic appliances. Bite tray and fixator. Philosophy and neurophysiology of construction bite.

<b>Cilji in kompetence:</b>	<b>Objectives and competences:</b>
-----------------------------	------------------------------------

Cilj predmeta je izobraziti študente o rasti in razvoju kraniofacialnega sistema in denticije, prepoznavanju nepravilnosti, predkliničnih ortodontskih postopkih ter oblikovanju in konstrukciji snemnih in nesnemnih ortodontskih aparatov.

The goal is to educate students about the growth and development of craniofacial structures and dentition, basic of malocclusions, preclinical laboratory orthodontic procedures and design, and construction of removable and fixed orthodontic appliances.

**Predvideni študijski rezultati:**

Študentje naj bi razumeli filozofijo oblikovanja snemnih in nesnemnih ortodontskih aparatov, poznavanje laboratorijskih postopkov odlitkov in oblikovanja mavčnih modelov ter načine izdelave aparatov. Poznati morajo metode spremljanja rasti in razvoja kraniofacialnega sistema ter prepoznati nepravilnosti.

Znanja in spretnosti so podrobneje opisane v Katalogu znanj in spretnosti.

**Intended learning outcomes:**

Students should be able to understand the design philosophy of removable and fixed orthodontic appliances, be familiar with laboratory procedures of casting and forming plaster models and ways of constructing appliances. They must be familiar with methods of monitoring growth and craniofacial development and to identify malocclusions.

Knowledge and skills are described in more detail in the Catalogue of Knowledge and Skills.

**Metode poučevanja in učenja:**

Predavanja	Lectures
Seminarji	Seminars
<b>Načini ocenjevanja:</b>	<b>Delež (v %) Assessment: Weight (in %)</b>
Način (pisni izpit, ustno izpraševanje, naloge, projekt)  Končni izpit je sestavljen iz: - ustnega teoretičnega 80 % in - praktičnega dela izpita 20 %.	80% 20%
