Jeziki / Languages:	Predavanja / Lectures: slovenski/slovene Vaje / Tutorial: slovenski/slovene					
Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:					
/	/					
Vsebina:	Content (Syllabus outline):					
<u>Predavanja</u> Obdelava in interpretacija rezultatov: sistematske in slučajne napake, uporaba statistike za ovrednotenje meritev. Ravnotežja v homogenih in heterogenih sistemih, gravimetrična analiza, titracije, nevtralizacija, oksidacija in redukcija,obarjanje ter tvorba kompleksov kot osnova analiznih metod. Vrste, selektivnost in občutljivost reagentov ter pripadajočih kemijskih reakcij. Elektrokemijske metode: Potenciometrija (ionoselektivne elektrode), elektrode s steklano membrano, elektrode s kristalinično homogeno in heterogeno membrano, elektrode s tekočinsko membrano, voltametrija, DC-polarografija in pulzna polarografija, stripping analiza, ciklična voltametrija, amperometrične titracije, konduktometrija, elektrogravimetrija in kulometrija, elektroliza pri konstantni napetosti in pri konstantnem toku, elektroliza pri kontroliranem potencialu delovne elektrode, potenciostatična kulometrija, kulometrične titracije. <u>Seminari</u> Na posamezne teme iz predavanih vsebin.	<u>Lectures</u> Evaluation and interpretation of results, systematic and random errors, and statistical methods for evaluation of measurements. Equilibrium in homogeneous and heterogeneous systems, gravimetric analysis, titrations, neutralization, oxidation and reduction, precipitation, and formation of complexes as a fundation for analytical methods. Types, selectivity, and sensitivity of reagents and chemical reactions. <u>Electrochemical methods:</u> Potentiometry, ion-selective electrodes, glass electrodes, solid state crystalline homogeneous and heterogeneous membrane electrodes, liquid membrane electrodes, voltammetry, DC polarography, and pulse polarography, stripping analysis, cyclic voltammetry, amperometric titrations, conductometry, electrogravimetry and coulometry, electrolysis with controlled voltage and controlled current, electrolysis with controlled potential of the working electrode, potentiostatic coulometry, coulometric titrations. <u>Seminars</u> Topics related to themes presented in the course of the lectures.					

Laboratorijske vaje

Gravimetrija in titrimetrija z vizualnimi indikatorji (priprava standardnih raztopin, alkalimetrične titracije, reduksijsko oksidacijske, obarjalne in kompleksometrične titracije).

Laboratory work

Gravimetry

Titrimetry using visual indicators (preparation of standard solutions, acid/base titrations, oxidation/reduction titrations, precipitation titrations, complex formation titrations).

Temeljni literatura in viri / Readings:**TEMELJNA LITERATURA:**

1. D. A. Skoog et al., Fundamentals of Analytical Chemistry, 10. izdaja, Cengage Learning, 2021.

DODATNA LITERATURA:

1. D. A. Skoog, F. J. Holler, S. R. Crouch, Principles of Instrumental Analysis, 7. izdaja, Thomson Brooks/Cole, 2017.

Cilji in kompetence:

Študent bo dobil pregled znanja in teoretske osnove uporabe klasičnih analiznih metod.

Analiza je osnova za vrednotenje kvalitete hrane, okolja in živih bitij. Predmet Analizna kemija obravnava področje kemijske analize teoretično poglobljeno, praktično in na način, da usposobi študente ne samo za razumevanje, temveč tudi za reševanje analiznih problemov.

Predmet daje integralni pregled teorij in metod uporabnih za identifikacijo in rešitev vrste realnih problemov kemijske analize. Na primerih iz področij farmacije, anorganske kemije, organske kemije in biokemije bo študent razumel kemijske in fizikalne procese, ki spremajo analizni postopek z vidikov kemijskih ravnotežij in kinetike.

Študent bo svoje znanje poglabljal z računskimi pristopi, baziranimi na farmacevtski kemiji ter z uporabo znanj anorganske in organske kemije.

Objectives and competences:

The subject receives a complete overview of knowledge and the theoretical basis concerning applications of classical analytical methods.

Analysis is the basis for the quality evaluation of food, environment, and living organisms. The course *Analytical chemistry* gives a complete theoretical overview of chemical analysis. Laboratory work provides students with the knowledge not only for understanding but also for solving analytical problems. The subject offers an integral overview of theories and methods used for the identification and quantitative determination of real samples in chemical analysis.

Examples from pharmacy, inorganic chemistry, organic chemistry, and biochemistry are used to understand chemical and physical processes that accompany the analytical procedure from the view of chemical equilibrium and kinetics. The student deepens their knowledge with computational principles based on pharmaceutical chemistry and applications from inorganic and organic chemistry.

Predvideni študijski rezultati:**Intended learning outcomes:****Znanje in razumevanje:**

Po zaključku tega predmeta študent:

- razume osnove kemijske analize osnovnih klasičnih analiznih meritev,
- razume osnovne principe in zakone, na katerih temeljijo gravimetrične in titrimetrične analizne metode,
- zna kvantitativno ovrednotiti rezultate meritev,
- spozna osnovne principe elektrokemijske analize.

Prenesljive/klijučne spremnosti in drugi atributi:

Študent pridobi ročne spremnosti, predvsem sposobnost praktičnega dela z laboratorijsko steklovinjo in opremo. Zna reševati analizne probleme, od enostavnejših do bolj zapletenih računskih nalog z uporabo stoichiometričnih razmerij, ravnotežnih reakcij ter zna računati meritno negotovost.

Knowledge and understanding:

On completion of this course, the student:

- understands the basics of chemical analysis of classical analytical measurements,
- understands basic principles and laws on which gravimetric and titrimetric analytical methods are based,
- is capable of quantitatively evaluating the results of measurements,
- identify basic principles of electroanalysis

Transferable/Key Skills and other attributes:

The student acquires manual skills, mostly the ability of practical work with laboratory glassware and equipment. They are capable of solving analytical problems, from simple to more complex ones, and calculations using stoichiometric ratios and equilibrium equations, and calculation of measurement uncertainty.

Metode poučevanja in učenja:

Predavanja
Seminari
Vaje (laboratorijske)

V okviru seminarjev se bodo obravnavale aktualne teme s področja predmeta

Learning and teaching methods:

Lectures
Seminars
Tutorial (laboratory work)

The seminars will cover trending topics in the subject area

Načini ocenjevanja:

Delež (v %) /
Weight (in %)

Assessment:
