Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:	Prerequisites:					
/	/					
Vsebina:	Content (Syllabus outline):					
<ol style="list-style-type: none"> Uvod v biokemijo, molekulske osnove življenja, voda, biološko pomembni elementi, ioni in glavne skupine biomolekul. Uvod v strukturo beljakovin. Beljakovine: splošna zgradba in lastnosti, razdelitev po funkciji (encimi, transportne, skladiščne, kontraktilne, strukturne, obrambne in regulatorne beljakovine). Fibrilarne in globularne beljakovine. Encimi: splošne značilnosti in osnove encimske kinetike. Biokemijske komponente celic in tkiv Prebavni encimi, uvod v metabolne poti – regulacija metaboličnih poti, glavni eksperimentalni pristopi za študij metabolizma Oksidativni procesi v celici in pridobivanje energije Metabolizem ogljikovih hidratov, uravnavanje sinteze in razgradnje ogljikovih hidratov Metabolizem maččobnih kislin in trigliceridov Metabolizem nukleotidov in nukleinskih kislin, uravnavanje metabolizma nukleotidov, bolezni povezane z metabolizmom nukleotidov Metabolizem aminokislin, prebava proteinov, razgradnja aminokislin, biosinteza neesencialnih aminokislin, uravnavanje hitrosti metabolizma aminokislin, bolezni povezane z metaboličnimi 	<ol style="list-style-type: none"> Introduction to the biochemistry, molecular bases of life, water, elements and ions of biological importance, classification of biomolecules. Introduction to the protein structure. Proteins: general structure and characteristics, classification by the function (enzymes, transport, contractile, accumulative, defence and regulatory proteins). Fibrillar and globular proteins. Enzymes: general features and bases of enzymatic kinetics. Biochemical components of cells and tissues. Digestive enzymes; introduction to the metabolic pathways, major experimental approaches to the study of metabolism. Oxidative processes in the cell and energy generation. Metabolism of carbohydrates, regulation of anabolism and catabolism of carbohydrates. Metabolism of fatty acids and triglycerides. Metabolism of nucleotides and nucleic acids, regulation of their metabolism, diseases. Metabolism of amino acids and proteins, anabolism and catabolism of essential and non-essential amino acids, regulation of metabolism, diseases that arose 					

<p>defekti v metabolizmu aminokislin; aminokisline kot izhodne snovi v biosinteza biološko pomembnih spojin</p> <p>13. Pomen biokemije za razlago in zdravljenje bolezni</p> <p>14. Biosinteza proteinov, usmerjanje, znotrajcelični transport, zvijanje, kontrola kvalitete, degradacija</p> <p>15. Vloga hormonov v uravnavanju metaboličnih procesov</p> <p>16. Metabolizem goriv v različnih metabolnih stanjih (po obroku, med obroki, dolgotrajno stradanje)</p> <p>17. Metabolične značilnosti posameznih tkiv in organov. Skeletna mišica, srčna mišica, jetra, maščevje, ledvica, živčevje, krvni elementi, koža, oko, pljuča, vezivno tkivo</p> <p>18. Medsebojna odvisnost in vloga organov v metaboličnih procesih pri človeku.</p> <p>19. Biokemija krvnih skupin in koagulacija krvi;</p> <p>20. Metabolne bolezni, vključno z dednimi sindromi</p>	<p>from metabolic disorders, amino acids as precursors in biosynthesis of biologically important molecules.</p> <p>13. Cilji in kompetence:

Cilj tega predmeta je nadgraditi znanja iz splošne kemije in poznavanje kemijske zgradbe molekul in reakcij, ter spoznati in poglobljeno razumeti biokemijske reakcije in procese v človeškem organizmu.

Študent se bo spoznal z biomolekulami v človeškem telesu in s temeljnimi zakonitostmi ter mehanizmi biokemijskih procesov . Ti predstavljajo osnovo za razumevanje življenjskih procesov v zdravem in bolezenskem stanju organizma.

Biokemija je povezana z vsebinami molekularna biologija in biologija celice, študent bo tudi lažje razumel patofiziologijo, farmakologijo in večino kliničnih predmetov.

Objectives and competences:

The objective of this course is to upgrade the knowledge in general chemistry and chemical structures of molecules and reactions, and to learn and understand at the deep level the biochemical reactions and processes in the human body.

Students will get acquainted with biomolecules in the human body and with fundamental characteristics and mechanisms of biochemical processes. These represent the basis for understanding the life processes in the healthy or pathological state of the organism.

Biochemistry is related to other life sciences and will help the students to better understand Molecular Biology, Cell Biology, Pathophysiology, Pharmacology and most of the clinical subjects.

Predvideni študijski rezultati:**Intended learning outcomes:****Znanje in razumevanje:**

Študent pridobi znanje iz biokemijskih procesov, ki omogoča živim organizmom normalno delovanje in vzdrževanje optimalnih koncentracij celičnih sestavin in telesnih tekočin ter rast in razmnoževanje. Ob koncu predmeta je študent sposoben navesti in strukturno opisati poglavite makromolekule v celicah in tkivih ter pojasniti njihove funkcije v celici.

Študent razume in zna predstaviti biokemijske reakcije in molekularne procese ter razložiti transportne pojave, ki potekajo v človeškem organizmu.

Biokemija integrira molekularne osnove temeljnih življenjskih procesov in je nujna za razumevanje vzrokov bolezni ter molekularnih pristopov zdravljenja. Študent ob koncu predmeta zna interpretirati molekularne mehanizme delovanja zdravega organizma in povezati okvare v metabolnih poteh z nastankom bolezni.

Prenesljive/ključne spremnosti in drugi atributi:

Študent spozna delovanje organizma na molekulski ravni in razvije spremnosti dela v skupini ter komputacijske spremnosti.

Knowledge and understanding:

Students acquire the fundamental knowledge of biochemical processes that enable living organisms to function normally and to maintain optimal concentrations of cellular components and body fluids, and are required for growth and reproduction.

At the end of this course, the student is able to list and describe the structures of the main macromolecules in cells and tissues and to explain their functions in the cell. The student understands and is able to describe biochemical reactions and molecular processes and is able to explain the transport processes occurring in the human organism.

Biochemistry integrates the molecular basis of life processes and is essential for understanding the causes of disease and the molecular approaches for treatment. At the end of the course, the student will be able to interpret the molecular processes in a healthy organism and to associate the defects in metabolic pathways to the development of disease.

Transferable/key skills and other attributes:

The student gains in-depth knowledge of how the organism functions at the molecular level and develops teamwork and computational skills.

Metode poučevanja in učenja:**Learning and teaching methods:**

Predavanja
Seminari

V okviru seminarjev se bodo obravnavale aktualne teme s področja predmeta

Lectures
Seminars

The seminars will cover trending topics in the subject area

Načini ocenjevanja:

Delež (v %) /
Weight (in %)

Assessment:

Način (pisni izpit, ustno izpraševanje, naloge, projekt)

- pisni izpit

ŠTUDIJSKE OBVEZNOSTI ŠTUDENTOV

- 80% prisotnost na seminarjih

POGOJ ZA PRISTOP K IZPITU

- 80% prisotnost na seminarjih

100 %

Type (examination, oral, coursework, project):

- written exam

ACADEMIC OBLIGATIONS OF STUDENTS

- 80% attendance at seminars

CONDITIONS FOR TAKING THE EXAM

- 80 % attendance at seminars
