| Vsebina (kratki pregled učnega načrta): | Content (syllabus outline): | | | | | | |
| Biofizika celice in celične membrane: mehanske lastnosti celične membrane, metabolizem celice, termodinamski potenciali in kemijski potencial, kislinsko-bazno ravnotežje, osmoza, difuzija in elektrodifuzija, membranski potencial, Nernstova enačba, Donnanovo ravnovesje, elektrodifuzijski potencial. Električna vzdražljivost celice in prenos električnega impulza. Biofizika celičnega skeleta in molekularni motorji (delovanje mišice). Izbrani fiziološki sistemi: kri in krvni obtok, čutila, okostje in mišice, živčevje. Regulacija bioloških sistemov (sistemska analiza, regulacija metaboličnih sistemov – kontrolna teorija). Biološki dinamični sistemi (celična signalizacija, razvoj populacije). Samoorganizacija bioloških sistemov. Teorije in modeli evolucije. Interakcija neionizirajočega | Cell and cell membrane biophysics: mechanical properties of a cell membrane, cellular metabolism, thermodynamic potentials and chemical potential, acid-base equilibrium, osmosis, diffusion and electro-diffusion, the membrane potential; Nernst equation, Donnan equilibrium, electro-diffusion potential. Electrical excitability and propagation of electric pulse. Biophysics of cytoskeleton and molecular motors (muscle contraction). Selected physiological systems: blood and cardiovascular system, senses, skeletal-muscular system, nervous system. Regulation of biological systems (system analysis, control theory of metabolic systems). Biological dynamic systems (cell signalling, growth of population). Self-organisation of biological systems. Theory and models of evolution. Interaction of non-ionising electromagnetic radiation with human | | | | | | |

| | |
