Pogoji za vključitev v delo oz. za opravljanje študijskih obveznosti:

Prerequisites:

Vsebina:

Content (Syllabus outline):

Biomehanika: Osnove biomehanike skeleta in mišic s poudarkom na čeljusti in obraznih mišicah; sile, navori, energija, delo, toplota. Mehanske lastnosti materialov, ki se uporabljajo v zobozdravstvu (mehanske napetosti, deformacije).

Biomechanics: Basics of biomechanics of skeleton and muscles with emphasis on the jaw and facial muscles; force, torque, energy, work, heat. Mechanical properties of materials used in dentistry (mechanic stress and deformations).

Dinamika tekočin in krvni obtok: Tok nevskočnih in viskoznih tekočin; tlak v mirujočih tekočinah, laminarni in turbulentni tok tekočine, Reynoldsovo število, Bernoullijeva enačba in Hagen-Poiseuilleov zakon.

Fluid dynamics and blood circulation: The flow of non-viscous and viscous fluids; hydrostatics pressure, laminar and turbulent fluid flow, Reynolds Number, Bernoulli Equation and Hagen-Poiseuille Equation.

Energijske pretvorbe v človeškem telesu: Dnevne potrebe po energiji, celični metabolizem. Osnove termodinamike, prvi in drugi zakon termodinamike. Podobnosti in razlike energijskih pretvorb v našem telesu v primerjavi z delovanjem toplotnih strojev. Termodinamski potenciali, kemijski potencial.

Energy conversion in the human body: Daily energy consumption, cellular metabolism. Basics of thermodynamics, the first and the second law of thermodynamics. Similarities and key differences between energy conversion in the human body and acting of heat engines. Thermodynamic potentials, chemical potential.

Tokovi nenabitih delcev in ravnovesje: Ravnovesno in stacionarno stanje celice. Prvi Fickov zakon, difuzijska

Fluxes of non-charged particles and equilibrium: The equilibrium and the steady state of cells. The first Fick's

enačba, prehajanje nenabitih delcev preko celične membrane, transport respiratornih plinov v pljučih, osmoza.

Električni pojavi v človeškem telesu: Električni tok, napetost in električna upornost. Celična membrana kot električni kondenzator. Membranski potencial; Nernstova enačba, Donnanovo ravnovesje, elektrodifuzijski potencial. Električni monopol in dipol, polarne molekule kot električni dipoli. Srce kot električni dipol.

Zvok in biofizika ušesa: Zvok kot mehansko valovanje. Vrste zvoka, jakost zvoka in fiziološke enote, meje slišnosti človeškega ušesa, Dopplerjev pojav. Ultrazvok: Uporaba ultrazvoka v klinični praksi.

Svetloba in biofizika očesa: Svetloba kot elektromagnetno valovanje. Obravnava tankih leč; preprost model očesa, daljnovidnosti in kratkovidnosti. Optične naprave, mikroskop. Uporaba svetlobnih tehnik v klinični praksi: Laserji, svetlobna vlakna, endoskopija

Zgradba snovi in radioaktivnost: Bohrov model atoma. Zgradba in stabilnost atomskega jedra. Interakcija ionizirajočega sevanja s tkivom. Zaščita pred sevanji. Dozimetrija.

Fizikalne osnove nekaterih radioloških metod:  
Rentgenski (RTG) žarki: njihov nastanek, spekter in absorpcija RTG žarkov. Uporaba v diagnostiki, absorpcija rentgenskih žarkov v snovi in RTG slikanje, CT rentgen.  
Magnetna resonanca (MR) z upodabljanjem (MRI)  
PET/CT – pozitronska emisijska tomografija / računalniška tomografija.  
SPECT – enofotonska emisijska računalniška tomografija.

Kratek pregled vsebin laboratorijskih vaj pri predmetu Osnove biofizike:

- meritve zmogljivosti mišic
- sile in navori, ki se pojavijo v mišicah in čeljusti pri žvečenju
- merjenje tlaka in krvnega tlaka
- merjenje pretoka tekočin
- leče, lupa, mikroskop, model očesa
- daljnovidnost in kratkovidnost
- določanje velikosti slepe pege in določanje gostote fotoreceptorjev na očesnem ozadju
- merjenje električnih količin, Ohmov zakon
- merjenje membranskega potenciala
- elektrokardiografija
- spektri svetlobe in optična spektrometrija
- spektri zvoka, ton, zven, šum
- rentgenski žarki

law, diffusion equation, transport of non-charged particles across the cell membrane, transport of respiratory gases in lung; osmosis.

Electric phenomena in human body: Electric current, voltage and electrical resistance. Cell membrane as an electric capacitor. The membrane potential; Nernst equation, Donnan equilibrium, electro-diffusion potential. Electric monopoly and dipole, polar molecules as electric dipoles. Heart acting as an electric dipole.

Sound and biophysics of the ear: Sound as mechanical waves. Types of sound, sound intensity and the physiological units, limits of audibility of the human ear. Doppler effect.  
Ultrasound: Application of ultrasound in clinical practice.

Light and biophysics of the eye: Light as electromagnetic waves. Imaging with thin lenses; a simple model of the eye, farsightedness and nearsightedness. Optical devices, microscope.  
Applications of light techniques in clinical practice: Laser, fibre optics, endoscopy.

Structure of matter and radioactivity: Bohr atomic model. Structure and stability of atomic nucleus. The interaction of ionizing radiation with human tissue. Protection against the radiation. Dosimetry.

Physical fundamentals of some radiological methods.  
X-rays: their origins, X-ray spectrum and the absorption of X-ray beams. The use in diagnostics, X-ray absorption in the material and X-ray imaging, X-ray CT.  
Magnetic resonance (MR) with imaging (MRI)  
PET/CT – positron emission tomography / computed tomography.  
SPECT – single-photon emission computed tomography.

A brief overview of the experiments on the subject of Basics of biophysics:

- measurements of muscle strength
- forces and torques exerted by the masseter muscle in the jaw
- measurements of pressure and blood pressure
- measurement of fluid flow
- lenses, loupe, microscope, a model of human eye
- farsightedness and nearsightedness.
- determination of the size of blind spot and the density of photoreceptors in the eye
- measurements of electrical quantities, Ohm's law
- measurement of membrane potential
- electrocardiography
- light spectra and optical spectrometry
- sound spectra, pure tone, complex tone, noise

- osnove ultrazvočnih meritev v medicini  
- izbrani teoretični in računski primeri iz radiologije: obsevanje tumorjev.

- X-rays  
- basics of ultrasound measurements in medicine  
- selected theoretical and computational examples in radiology: irradiation of tumours.

#### Temeljni literatura in viri / Textbooks:

1. R. Glaser, Biophysics: An Introduction, Springer-Verlag, 2012.
2. P. F. Dillon, Biophysics: A Physiological Approach, Cambridge University Press, 2012.
3. J. Newman: Physics of the Life Sciences, Springer Science+Business Media, LLC, 2008.

#### Dopolnilno gradivo:

4. S. Amador Kane, Introduction to Physics in Modern Medicine. CRC Press, 2009.
5. Diagnostična in intervencijska radiologija. Splošni del. Urednik V. Jevtič, sourednika M. Šurlan, J. Matela. Založba Pivec, 2014.

#### Cilji:

Usvojiti osnovne fizikalne koncepte in zakonitosti, ki so pomembni za razumevanje fizikalnih aspektov bioloških procesov na ravni organizma, organa, tkiva in celic ter supramolekularnih in makromolekularnih struktur. Seznaniti se s ključnimi fizikalnimi procesi, ki dajejo osnovo za razumevanje fizioloških procesov v človeškem telesu, kakor tudi spoznati možnosti aplikacij v diagnostiki in zdravljenju.

#### Objectives:

To attain knowledge of the fundamental concepts and laws in physics important for understanding of different biological processes at levels of whole organisms, organs, tissues, cells, and supramolecular and macromolecular structures. To get acquainted with phenomena in physics which enable fundamental understanding of physiological processes in human body, as well as indicate their applications in diagnostics and medical treatments.

#### Predvideni študijski rezultati:

#### Intended learning outcomes:

##### Znanje in razumevanje:

Študentje usvojijo znanje temeljnih fizikalnih konceptov in zakonov potrebnih za razumevanje procesov v biologiji in fiziologiji človeka ter spoznajo aplikacije teh konceptov v medicini in klinični praksi.

##### Prenesljive/ključne spretnosti in drugi atributi:

Študentje znajo uporabiti preproste fizikalne koncepte in matematične modele za študij strukture in funkcije bioloških sistemov in primerov iz fiziologije človeka. Študentje si razširijo razgledanost na področju naravoslovja. Znano analizirati in interpretirati izmerjene eksperimentalne podatke.

#### Metode poučevanja in učenja:

##### Knowledge and understanding:

Students get knowledge of fundamental physical concepts and laws which are important for understanding of processes in human biology and physiology, as well as learn about the applications of these concepts in medicine and clinical practice.

##### Transferable/Key skills and other attributes:

Students are able to use simple physical concepts and mathematical models for studies of structure and function of biological systems and cases in human physiology. They become well broadly versed in science. They know how to present and interpret their measured experimental data.

#### Learning and teaching methods:
